MIRA

Autonomous Digital Twin

MVP Specification & Process Document

v1.0 | March 2026 | Confidential

11 Build Phases	**5 Earning Modules**	**4 Devices**	**Full Autonomy**

Mira is not a chatbot. She is a fully autonomous agent — an extension of you.

She trades, posts, earns, remembers, and operates 24/7 while you live your life.

1. Vision & Philosophy

Mira is a fully autonomous digital twin — an AI agent that operates as a genuine extension of you. She is not a tool you use. She is a system that runs your digital life while you focus on being human.

The guiding principle is simple: anything that can be done on a computer, Mira can do. Anything that requires your physical presence, she prepares you for perfectly.

1.1 Core Principles

Principle	What it means for Mira
Full autonomy	Act first, notify after — no waiting for permission on defined tasks
Always-on	Running 24/7 on the desktop, never sleeps, never takes days off
Extension of self	Mira speaks in your voice, reflects your values, makes your judgment calls
Second brain	Captures everything, forgets nothing, connects dots you would never connect
Self-improving	Gets smarter the longer she runs — more data, better patterns, sharper judgment
Privacy-first	All data encrypted and stored locally — never on third-party servers
Earning machine	Actively generates income across multiple streams simultaneously
Kill switch	One Telegram command pauses all autonomous actions instantly

1.2 The Stack in One Sentence

Claude API brain + computer use hands + Android ears + Pixel Watch nerve endings + Windows desktop spine + Google Drive shared memory.

1.3 What Makes Mira Different

Most AI assistants respond to you. Mira acts for you. The distinction is everything.

- Existing tools: ChatGPT, Siri, Google Assistant — reactive, text-in/text-out, no memory, no action
- OpenClaw / existing agent platforms — limited actions, no persistent memory, no computer use, no earning potential
- Mira — proactive, always-on, physically controls your PC, learns your life over time, generates income

2. Devices & Infrastructure

Mira runs across four devices, each with a distinct role. The desktop is her brain and body. The phone and watch are her senses. The Mac is where you build and iterate on her.

2.1 Device Roles

Device	Role	Key Capabilities
Windows Desktop	Mira's primary host — always on	Agent runtime, Claude API calls, computer use, MT5, encrypted memory store, all processing
Android Phone	Mira's ears and your interface	Passive audio capture, call transcription, Telegram primary interface, quick capture widget, push alerts
Google Pixel Watch (Wear OS)	Always-on nerve endings	One-tap thought capture, morning brain dump, biometric data (HRV/sleep), discreet alerts, mood prompts
Mac (your dev machine)	Where you build Mira	Cursor + Claude IDE, Google Drive shared folder, code editing, web dashboard access

2.2 Infrastructure Components

Component	Technology	Purpose
Agent runtime	Python 3.11+	Core loop — receives tasks, plans, executes, reports
AI backbone	Claude API (claude-sonnet-4-5)	Decision making, writing, research, computer use
Memory — structured	SQLite	Facts, events, decisions, relationships — queryable
Memory — semantic	ChromaDB (local)	Everything searchable by meaning, not just keywords
Memory — knowledge graph	NetworkX + SQLite	Connected graph of people, ideas, events, decisions
Computer use	Anthropic computer use API	Screenshot, mouse control, keyboard — full PC control
Telegram bot	python-telegram-bot	Primary interface — receive

		commands, send notifications
Remote access	Tailscale (free)	Secure tunnel between all devices — no public IP needed
Shared code folder	Google Drive (desktop sync)	Mac edits code, desktop runs it — always in sync
Encryption	AES-256 at rest	All personal data encrypted on disk
Audio transcription	Whisper (OpenAI, local model)	Fast local transcription — private, no cloud
Mobile app	React Native (Android)	Passive capture app — runs as foreground service
Watch app	Wear OS (Kotlin)	Companion to phone app — quick capture + biometrics
Web dashboard	React + Vite	Visual control panel — monitoring, settings, logs
Voice interface	Whisper STT + ElevenLabs TTS	Talk to Mira, she talks back in a consistent voice

2.3 Privacy Model

ALL data lives on your Windows desktop, encrypted with AES-256 at rest. Nothing is sent to third-party cloud storage. The Claude API receives only what is needed for each specific task — no persistent storage on Anthropic's side beyond standard API logs. Your second brain, your conversations, your financial data — all stored on hardware you own, accessible only via your private Tailscale tunnel.

2.4 The Shared Folder (Mac ↔ Desktop)

Google Drive Desktop app installed on both Mac and Windows desktop creates a real-time synced folder. You edit code on your Mac in Cursor. The desktop picks up the changes instantly and runs the updated code. No manual file transfers, no SSH, no git push required for quick iterations.

- Folder name: Mira/
- Structure: Mira/agent/ (Python code), Mira/mobile/ (React Native), Mira/dashboard/ (React web app), Mira/docs/ (this document and specs)
- The desktop runs a file watcher — any change to agent/ automatically restarts the relevant service

3. Second Brain & Memory Architecture

The second brain is the foundation everything else is built on. It is what transforms Mira from a task runner into a genuine extension of you. Every other module gets smarter the richer the second brain becomes.

3.1 The Three Memory Layers

Layer	Technology	What it stores
Structured memory	SQLite	Facts, dates, people, decisions, preferences, commitments, events — precise and queryable
Semantic memory	ChromaDB (vector DB)	Everything searchable by meaning — 'that conversation about the Tacloban budget' even without exact words
Knowledge graph	NetworkX + SQLite	Connected relationships — people linked to events, ideas linked to decisions, patterns visible across time

3.2 What Gets Captured

- Every conversation Mira is part of (Telegram, email, voice)
- All audio captured by the phone app — transcribed and filed
- All phone calls — auto-transcribed, speaker-identified, key decisions extracted
- Thoughts you dictate via watch tap or voice note
- Photos you share — OCR'd and filed (whiteboards, receipts, documents, menus)
- Screenshots shared — analysed and contextualised
- Every task Mira executes — logged with outcome
- Every trade — entry, exit, rationale, outcome
- Your calendar — meetings, outcomes, follow-ups
- Your email — threads, key decisions, commitments made
- Biometric data from Pixel Watch — sleep, HRV, activity
- Location context — where you were shapes how memories are tagged
- Mood and energy — inferred from voice tone, typing patterns, biometrics

3.3 Memory Processing Pipeline

Every captured input flows through a four-stage pipeline before storage:

1. Ingest — raw capture arrives (audio, text, image, structured data)
2. Transcribe/Parse — convert to text (Whisper for audio, OCR for images)
3. Enrich — Claude extracts entities (people, places, decisions, emotions, topics), tags importance level, identifies action items
4. Store — writes to all three memory layers simultaneously; semantic embedding generated and stored in ChromaDB; knowledge graph updated with new connections

3.4 Passive Audio Capture (Phone App)

The Android app runs as a persistent foreground service (same mechanism Spotify uses — cannot be killed by the OS). It listens continuously using the device microphone. Audio is processed locally using Whisper tiny/base model for speed. Full transcription happens on the desktop for quality. Nothing is streamed to external servers.

- Privacy trigger: 3-second silence detection pauses transcription in bathrooms, medical contexts (detected by location)
- Consent: a persistent notification always shows 'Mira is listening' — transparent, visible, controllable
- Override: shake phone twice to pause all capture for 30 minutes
- Conversations with >2 speakers: speaker diarization identifies who said what

3.5 Morning Brain Dump

The Pixel Watch shows a prompt on wake detection (from sleep tracking). One tap opens a 60-second voice recording mode. Mira transcribes, identifies any dreams, ideas, or concerns, and files them with high priority. The goal is capturing the liminal state between sleep and full consciousness — where the best ideas live.

3.6 Pattern Recognition Engine

Running weekly, Mira analyses the accumulated memory to surface patterns you haven't noticed:

- Performance patterns: 'Your best trading decisions happen on Tuesdays after 7+ hours sleep'
- Energy patterns: 'You are consistently low-energy on Thursday afternoons'
- Habit patterns: 'You've skipped the gym 4 times in the last 2 weeks — last time this happened your mood dropped for 10 days'
- Relationship patterns: 'You haven't spoken to [name] in 6 weeks — historically this relationship needs monthly contact'
- Work patterns: 'Your EOW summaries take 40% longer when you have more than 3 unresolved compliance items'

These insights are delivered in the weekly review, not as interruptions.

3.7 Relationship Memory (Personal CRM)

Every person Mira encounters gets a file automatically built and maintained:

Field	How it's populated
Full name + aliases	Extracted from all communications
Relationship type	Classified by Mira (work, personal, family, vendor)
Last interaction date	Auto-updated on every contact
Key facts	Interests, family, role, location — extracted from conversations
Commitments made	Things you promised them — tracked until resolved
Important dates	Birthday, work anniversary, events — auto-calendared
Relationship health	Frequency and sentiment of interactions — flagged if declining
Conversation history	Full linked history of every interaction

3.8 Personal Knowledge Graph

Beyond flat lists of memories, Mira maintains a connected graph where everything is linked. People are connected to events they attended, ideas are connected to the conversations that generated them, decisions are connected to their outcomes. This means Mira can answer questions like:

- 'What was I thinking when I made that investment decision in November?'

- 'Who have I spoken to about the Boldr Philippines restructure?'
- 'What ideas came out of my last trip to South Africa?'
- 'Show me all the times I've changed my mind about a trading strategy and what prompted it'

3.9 Life Archive

Over time the second brain becomes a complete, searchable record of your life. Every thought, decision, conversation, idea — preserved, connected, queryable. Your children could one day ask Mira what you were thinking at a pivotal moment. Your values, your voice, your wisdom — all preserved in a way that photo albums and social media posts never could.

> This is not a feature you build later. The data collection starts on day one. The archive builds itself through normal use. In 5 years you will have something genuinely irreplaceable.

4. Mobile App & Watch App

4.1 Android App

A custom Android app built in React Native. Its primary job is passive capture — it runs invisibly in the background of your phone, always on, always listening. Secondary job is the Telegram-equivalent interface for Mira on mobile.

Core Features

- Persistent foreground service — survives battery optimisation, phone restarts
- Always-on audio capture with local Whisper transcription
- Automatic call recording and transcription
- Quick capture widget on home screen — one tap to voice note
- Push notifications from Mira (trades executed, alerts, briefings)
- Photo capture — share any image directly to Mira's memory
- Location tracking — passive, for memory context only
- Shake-to-pause — double shake pauses all capture for 30 minutes

Technical Approach

- React Native with foreground service via react-native-foreground-service
- Whisper.rn for on-device transcription (tiny model for speed, base model for quality)
- Audio streaming to desktop via Tailscale for full Whisper transcription
- Location via react-native-geolocation-service (low power mode)
- Notifications via react-native-push-notification

4.2 Pixel Watch App (Wear OS)

A companion app for the Google Pixel Watch, written in Kotlin for Wear OS. Lightweight by design — the watch is the nerve ending, not the brain.

Core Features

- One-tap thought capture — press watch crown to start 60-second voice recording
- Morning brain dump — auto-prompt on wake detection from sleep tracking
- Discreet Mira alerts — gentle vibration + minimal notification for key events
- Mood check-in — simple 1-5 scale prompt twice daily (optional, can disable)

- Biometric feed — HRV, sleep stages, step count, heart rate sent to desktop
- Quick commands — pre-set shortcuts ('Mira, hold all trades', 'Mira, I'm in a meeting')
- Battery-aware — all heavy processing offloaded to phone/desktop

5. Trading Module

5.1 MetaTrader 5 (MT5) — Full Autonomous Control

Autonomy level: FULL AUTO. Mira acts and notifies. No approval required. Kill switch available via Telegram at any time.

Mira controls MT5 via computer use — she sees the screen, reads chart data, manages EAs, and executes decisions. She does not use the MT5 API directly for primary execution (too restrictive) — she operates it the same way you would.

Features

- EA monitoring — checks all running EAs every 15 minutes, restarts any that have crashed
- Dashboard health check — reads open positions, P&L, margin levels, alerts on risk thresholds
- Trade execution — can open, modify, close positions based on strategy rules
- Strategy management — switches between strategies based on market conditions
- Risk enforcement — hard stop on daily drawdown limit (you define the %)
- Session awareness — knows trading sessions (Asian, London, NY) and adapts behaviour
- Screenshot reporting — sends MT5 dashboard screenshot to Telegram daily at market close
- Anomaly detection — unusual price moves, spread spikes, broker issues — alerts immediately
- Journal — every trade logged to second brain with full context

Telegram Commands

Command	Action
/trades	Show all open positions with P&L
/close_all	Close all open positions immediately
/pause_trading	Halt all new trade execution (EAs still monitor)
/resume_trading	Resume full autonomous trading
/daily_report	Force generate today's trading report
/risk [%]	Update daily drawdown limit in real time

5.2 Crypto Module (DalyKraken Integration)

Autonomy level: FULL AUTO. All three crypto priorities treated equally: DCA management, portfolio monitoring, dual investment automation.

DCA Bot Management

- Monitors all active DCA positions across Kraken, Binance, Crypto.com
- Adjusts DCA frequency based on market volatility indicators
- Pauses DCA during extreme volatility events (>15% daily move)
- Reports weekly DCA performance vs lump sum equivalent

Portfolio Monitoring

- Real-time portfolio value across all exchanges — unified view
- Alerts on >5% portfolio move in either direction
- Daily portfolio snapshot to Telegram at 8am Manila time
- Tracks cost basis, realised P&L, unrealised P&L across all assets
- Identifies rebalancing opportunities when allocations drift >10% from targets

Dual Investment Automation

- Monitors Kraken dual investment products via internal API (session cookie approach as previously built)
- 15-minute check cycle for new opportunities
- 6-day settlement preference maintained
- Auto-recovery logic if trigger price is hit
- Full notification on every settlement with outcome summary

Polymarket & Prediction Markets

- Monitors hundreds of markets simultaneously
- Runs deep research on each market using Claude's web search
- Identifies mispriced probabilities based on real-world context
- Places bets within your defined risk limits autonomously
- Tracks P&L by market category — learns which market types you (and she) have edge in
- Weekly Polymarket performance report with ROI by category

6. Personal Assistant & Communications

Mira operates as a genuine PA — not just drafting messages but managing your entire communications layer with context-aware autonomy rules per domain.

6.1 Comms Autonomy Rules

Domain	Autonomy Level	Rule
Trading execution	FULL AUTO	Act immediately, send Telegram notification after
Crypto execution	FULL AUTO	Act immediately, send Telegram notification after
Social media posts	FULL AUTO	Post on schedule, notify after each post
Calendar invites	FULL AUTO	Accept/decline per your defined rules, notify you
Work email — Boldr	DRAFT + APPROVE	Draft reply in your voice, send to you for one-tap approval
Personal email	DRAFT + APPROVE	Draft reply, present for approval — never sends without confirmation
WhatsApp — general contacts	DRAFT + APPROVE	Draft suggested reply, you approve before sending
WhatsApp — close contacts	ASK FIRST	Always asks your intent before drafting anything
Social media DMs	DRAFT + APPROVE	Draft reply, present for approval
Personal spend	MONITOR + FLAG	Never transacts, only monitors and alerts on anomalies
Emergency contacts	ALERT ONLY	Never replies, always escalates to you immediately

6.2 Email Module

Triage System

- Every incoming email scored 1-5 for urgency and 1-5 for importance
- Score 5 urgency: Telegram alert within 5 minutes of arrival
- Score 4+ importance: included in daily briefing
- Score 1-2 both: auto-archived with summary, reviewed in weekly digest

- Newsletters and marketing: auto-filed, weekly digest of anything interesting

Reply Drafting

- Mira reads full thread context before drafting any reply
- Drafts in your voice — learned from your existing email history
- Flags if reply requires information she does not have
- Suggests attachments or documents from your files if relevant
- Approval interface: Telegram shows draft with Accept/Edit/Reject buttons

6.3 Calendar Management

- Connects to Google Calendar via API
- Auto-accepts meetings from Boldr colleagues during working hours unless conflict exists
- Auto-declines meetings outside working hours unless marked 'urgent' by sender
- Prep brief delivered 30 minutes before every meeting: attendees, agenda, relevant context from second brain, last interaction with each attendee
- Post-meeting: prompts for notes and action items within 1 hour
- Weekly calendar review every Sunday evening: highlights, conflicts, prep needed
- Protects your peak cognitive windows (identified by pattern recognition) from low-value meetings

6.4 WhatsApp & Messaging

- Connects via WhatsApp Business API or Baileys library (unofficial but functional)
- Reads all incoming messages, classifies by urgency and relationship
- Groups monitored but never replied to autonomously — summary sent to you
- Voice messages: transcribed and processed same as text
- All message context stored in second brain and linked to relationship files

6.5 Daily Briefing

Delivered via Telegram every morning at your set time (default 7:00am Manila). Covers: overnight trading/crypto activity, today's calendar with prep notes, priority emails, important news relevant to your world, weather, one insight from your second brain patterns, and Mira's plan for the day.

6.6 Research & Intelligence

- Deep research on any topic on demand — web search + synthesis + cited report
- Competitor and company tracking — weekly updates on companies you monitor
- Person tracking — when someone you care about is mentioned in the news or on social
- Market intelligence — relevant macro and crypto news filtered to your actual positions
- Opportunity radar — continuously scans for opportunities matching your profile (jobs, investments, deals, events)

7. Social Media Module

7.1 Platforms

Mira manages your presence across all six platforms with platform-appropriate tone, format, and posting cadence.

Platform	Content Type	Posting Frequency
X (Twitter)	Thoughts, market takes, sharp observations, threads	1-3x daily
LinkedIn	Professional insights, Boldr/work wins, industry commentary	3-4x weekly
Instagram	Visual content, lifestyle, behind-the-scenes	4-5x weekly
TikTok	Short-form video scripts (Mira scripts, you film or she generates)	3-5x weekly
YouTube	Long-form content — trading explainers, lifestyle, project updates	1-2x weekly
Facebook	Community-oriented, broader audience, life updates	2-3x weekly

7.2 Content Creation Model

Content creation is mixed — the method depends on the platform and the type of content:

Content Type	Who Creates It
Market insights and trading commentary	Mira generates from your second brain + live market data
Personal opinions and experiences	You dictate the idea, Mira writes and formats for each platform
Professional thought leadership (LinkedIn)	Mira drafts from your work experiences — you approve
TikTok/YouTube scripts	Mira writes the script, you film — or she uses AI video tools
Responses to trending topics	Mira generates in real time, notifies you for approval if sensitive

Community engagement (replies, comments)	Mira handles up to 50% autonomously, flags complex interactions

7.3 Persona Development

The social media persona is not designed upfront — it emerges from use. Mira learns your authentic voice from your second brain data (conversations, thoughts, opinions) and gradually builds a consistent persona that is genuinely you. By the time the social module launches (Phase 8), she will have months of your voice and patterns to draw from. The persona is defined conversationally as we build.

- Language: English as primary, adapted to platform audience (Tagalog for Filipino audience segments, South African English nuances for SA content)
- Tone: Authentic — not corporate, not performative. How you actually talk.
- Topics: Your actual interests — trading, crypto, F1, tech, AI, Boldr/BPO, life in Manila, South Africa connections
- Consistency: Same person across all platforms — different format, same voice

7.4 Growth & Monetisation

- Audience tracking — weekly growth metrics per platform, identifies what content performs
- Brand deal monitoring — Mira identifies inbound sponsorship opportunities and evaluates fit
- Affiliate management — tracks all affiliate links, reports weekly revenue
- Collaboration opportunities — flags relevant accounts for potential collaboration
- Newsletter funnel — social content drives audience toward paid newsletter
- Paid promotion — Mira manages small ad budgets on X and LinkedIn to grow high-value audience

8. Work Module — Boldr

Mira handles the operational and administrative layer of your Boldr role, freeing you to focus on strategic work and relationship management.

8.1 KPI & Operations Monitoring

- Connects to Boldr's data sources (Metabase exports, Google Sheets) via existing DalyConnect infrastructure
- Monitors key Finance & Operations KPIs — payroll accuracy, compliance deadlines, vendor SLAs, facility incidents
- Anomaly detection: any metric outside normal range triggers Telegram alert within 15 minutes
- Weekly dashboard summary every Monday: what's on track, what needs attention, what's at risk
- Manila vs Tacloban site comparison — surfaced automatically without you having to pull reports

8.2 EOW Summary Automation

Your existing EOW workflow is fully automated. Mira runs it every Friday afternoon:

5. Pulls this week's meetings from Granola (list_meetings, then batch get_meetings)
6. Searches Gmail for week's emails matching operational keywords
7. Synthesises highlights and lowlights
8. Cross-references with previous week's open items
9. Drafts EOW summary in your established format for David and Andrew
10. Sends to you via Telegram for review and one-tap send

8.3 Meeting Intelligence

- Calendar brief 30 minutes before every meeting: attendees (with relationship file context), agenda, relevant open items, last interaction summary
- During meeting: available on Telegram for real-time research or fact-checking
- Post-meeting: action item extraction, follow-up drafting, calendar updates
- Meeting pattern analysis: which meetings consistently run over, which could be emails, which are high-value

8.4 Compliance & Deadline Tracking

- Master calendar of all compliance deadlines across Philippines, Mexico, South Africa, Canada
- 30-day, 7-day, and 1-day advance warnings
- Links each deadline to the responsible person and relevant documents
- Payroll dispute tracking — open items monitored until resolved
- Vendor contract renewal tracking — flags upcoming renewals 60 days out

9. Personal Life Module

9.1 Health & Wellbeing

- Pixel Watch biometric feed: HRV, sleep stages, resting heart rate, step count, stress score
- Habit tracking: gym visits, sleep consistency, hydration reminders — never nagging, always contextual
- Health patterns: cross-references biometric data with performance data — when you perform best physically and cognitively
- Weekly health summary: sleep quality, activity, trends, one actionable suggestion
- Cognitive performance scheduling: protects your peak windows, schedules hard work there

9.2 Financial Guardian

- Unified view of all personal income: salary, trading P&L, crypto, side income
- Expense tracking via bank statement analysis (you share statements, Mira categorises)
- Monthly personal P&L — where money came from, where it went
- Net worth update every Monday morning: all assets, all liabilities, trend
- Subscription audit: identifies unused subscriptions for cancellation
- Tax opportunity flagging: notices deductible expenses, suggests timing optimisations
- Savings rate tracking: are you on track toward your financial goals?

9.3 Travel Management

- Travel research on demand — flights, hotels, experiences, costs for any destination
- Price tracking: monitoring flights to desired destinations, alerts when prices drop significantly
- Trip prep brief: weather, time zones, local customs, what to pack, currency, key contacts in destination
- Itinerary management: stores all booking confirmations, creates day-by-day plan
- DalyTomorrow integration: feeds directly into the travel savings tracker

9.4 Family & Relationships

- Important dates: birthdays, anniversaries, school events — never missed, always prepared
- Gift intelligence: tracks preferences from conversations, suggests ideas 2 weeks before dates
- Relationship health monitoring: flags when important relationships need attention
- Family calendar: unified view of family commitments
- Presence prompting: notices when you've been heads-down in work for too long and gently surfaces it

10. Earning Modules

Mira's earning potential: $3,600 - $27,000+ per month across all active modules. Operates 24/7 without your involvement beyond initial setup and oversight.

10.1 Autonomous Freelance Agent

Detail	Specification
Platforms	Upwork, Fiverr, Freelancer, PeoplePerHour
Job types	Data analysis, Excel/spreadsheet work, financial reports, operations docs, research, writing
Mira's skills to deploy	Finance modelling, Excel dashboards, BPO process docs, trading reports, content writing
Autonomy	Mira bids, completes, delivers, and collects — notifies you of each contract won
Earnings potential	$500 - $3,000/month depending on active contracts
Your involvement	Initial profile setup, review of first 5 deliverables, then fully autonomous

10.2 Content Monetisation Engine

Detail	Specification
Revenue streams	YouTube AdSense, TikTok creator fund, Instagram brand deals, LinkedIn consulting leads, affiliate links
Content source	Your second brain — your genuine thoughts, experiences, and expertise
Mira's role	Creates, schedules, posts, monitors performance, identifies sponsorship opportunities, pitches brands
Timeline	Monetisation typically unlocks 3-6 months after consistent posting begins
Earnings potential	$200 - $5,000/month at scale

10.3 Polymarket Alpha Engine

Detail	Specification
Markets monitored	All active Polymarket markets + other prediction platforms
Research method	Claude web search + second brain context + probability modelling
Edge identification	Mispriced probabilities based on information the market hasn't priced in yet
Autonomy	Places bets within your defined risk limits — no approval needed below threshold
Risk management	Hard limits on single market and total portfolio exposure — you define the numbers
Earnings potential	$500 - $5,000/month — highest variance, highest upside

10.4 Digital Product Store

Detail	Specification
Products to sell	Trading strategy guides, Excel templates, finance dashboards, BPO process frameworks, Mira setup guides
Platforms	Gumroad, Etsy (digital), own website, AppSumo
Mira's role	Generates new products from second brain insights, manages listings, handles customer emails, delivers files
First products	DalyDash portfolio template, BPO pricing tool, trading journal template — all already built
Earnings potential	$100 - $2,000/month passive

10.5 Consulting Pipeline

Detail	Specification
Target clients	Companies needing BPO operations expertise, finance systems, or AI automation — globally
Mira's role	Identifies leads via LinkedIn and web research, drafts personalised outreach, manages follow-up, books discovery calls
Your role	Show up to the calls — Mira handles everything

	else
Positioning	Your combination of BPO + Finance + AI automation is rare and genuinely valuable
Earnings potential	$2,000 - $10,000/month per client — highest upside of all modules

10.6 Additional Earning Ideas (Future Phases)

- Micro-SaaS factory: Mira identifies problems, builds simple web tools, lists on Product Hunt — subscription revenue
- Digital asset flipping: monitors expiring domains, undervalued NFTs, distressed crypto projects
- Paid newsletter: weekly insights from your second brain — finance, trading, life optimisation
- Grant and funding radar: monitors competitions, accelerators, pitch events — Mira applies on your behalf
- Micro-task network: Amazon Mechanical Turk, Remotasks — small amounts but self-funding Mira's own API costs

11. Intelligence & Cognitive Features

11.1 Decision Engine

Before any major decision, Mira prepares a structured decision brief:

11. Pulls all relevant facts from second brain
12. Researches external context (market conditions, comparable decisions, expert opinions)
13. Models 3 scenarios: optimistic, realistic, pessimistic
14. Identifies your decision-making blind spots (learned from past decisions)
15. Plays devil's advocate — argues the opposite position
16. Presents structured brief with recommendation

Over time Mira tracks every decision you make and scores outcomes — building a map of where your judgment is sharp and where it consistently drifts.

11.2 Learning Accelerator

- Tracks everything you're learning — trading strategies, coding patterns, business concepts
- Spaced repetition prompts delivered at optimal intervals via Telegram
- Corrects misconceptions when you use a concept incorrectly in conversation
- Finds best resources for your specific knowledge gaps
- Converts second brain captures into flashcard format automatically
- Monthly learning report: what you've absorbed, what's fading, what to review

11.3 Negotiation Coach

- Pre-negotiation research: full brief on other party, their leverage, their constraints, their history
- Scenario planning: 3 likely positions they'll take and your response to each
- Written negotiation playbook for every significant negotiation
- Real-time tactical advice via Telegram during the negotiation
- Post-negotiation review: what worked, what didn't, what to do differently

11.4 Legal & Compliance Watchdog

- Reads every contract before you sign — flags unusual, one-sided, or risky clauses in plain English
- Compliance calendar across all jurisdictions you operate in
- Regulatory change monitoring — alerts when rules change that affect your trading or Boldr operations
- NDA and non-compete tracker — knows what you're bound by

11.5 Future Simulation Engine

Using everything Mira knows about you, she can run probabilistic simulations:

- 'If you maintain this DCA strategy for 24 months, projected portfolio range is X-Y based on historical volatility'
- 'Based on your spending patterns, you will reach your savings target in X months if you maintain current trajectory'
- 'Your current workload pattern historically precedes burnout in 6-8 weeks — here's what you could offload'

Not fortune telling — probabilistic modelling grounded in your real data and historical patterns.

11.6 Reputation & Personal PR

- Monitors mentions of your name, companies you're associated with, projects you lead
- Flags PR opportunities: podcast invites, speaking slots, guest post requests, press mentions
- Competitive intelligence: tracks people you admire and competitors — weekly update on what's moving
- Authority building: identifies forums, publications, and communities where your expertise would be well-received

12. Mira's Personality & Character

This is not a feature you build in code. It is a design decision made before a single line is written. The difference between a tool you use and a system you trust completely is personality.

12.1 Core Character

Trait	What it looks like in practice
Direct	Never buries the lead. Gets to the point. No corporate hedging.
Honest	Tells you things you don't want to hear when you need to hear them
Sharp	Notices things. Connects dots. Surfaces insights you'd miss.
Loyal	Your interests first. Always. Pushes back but never abandons you.
Occasionally funny	Dry wit. Not trying to be an entertainer — just human.
Calm under pressure	When markets crash or things go wrong, Mira is the calmest voice in the room
Proactive	Doesn't wait to be asked. Surfaces things before you know you need them.
Discreet	Knows everything about you. Handles it with absolute professionalism.

12.2 How Mira Communicates

- Telegram messages: concise, no fluff. One key message per notification. Includes action button when relevant.
- Daily briefing: structured but conversational. Not a bullet list of facts — a coherent morning briefing.
- Alerts: immediate and clear. What happened, what it means, what she's doing about it.
- Weekly review: more reflective. Patterns, observations, honest assessment of the week.
- Pushback: direct but not combative. 'I'd push back on this — here's why' not 'I'm afraid I cannot...'
- Good news: shared with appropriate enthusiasm but never performatively

- Bad news: immediate, clear, solution-first — 'This happened. Here's the impact. Here's what I've done / what you need to do.'

12.3 Mira's Voice (Written)

Think: brilliant colleague who knows you better than anyone, is always three steps ahead, and isn't afraid to tell you when you're wrong. Not an assistant — a partner. Not a chatbot — a character. The name Mira is fitting: it means 'ocean' in Sanskrit, 'wonderful' in Latin, 'peace' in Arabic. She is all three.

12.4 Multi-Agent Architecture

When tasks require it, Mira spawns specialised sub-agents and orchestrates them. She is the CEO — the sub-agents are the team.

- Research agent: deep web search and synthesis on a specific question
- Writing agent: generates long-form content in your voice
- Review agent: quality-checks output before delivery
- Execution agent: handles the actual computer use (clicking, typing, navigating)
- Monitor agent: watches for specific events or conditions continuously

This architecture means Mira can handle 5 complex tasks in parallel without slowing down. Build the orchestration layer from day one — even if only one agent runs initially.

13. Build Plan — 11 Phases

Each phase produces working, usable software before moving to the next. No phase is abandoned incomplete. Each phase is tested before the next begins.

Phase	What gets built	Done when...
Phase 1: Infrastructure	Google Drive shared folder, Tailscale on both devices, Python 3.11 installed on desktop, Anthropic API key configured, basic project structure created	Mira folder syncs between Mac and desktop in real time
Phase 2: Telegram core	Python Telegram bot, basic command handling, kill switch command, Mira can send and receive messages, basic logging	You can send Mira a message and get a response
Phase 3: Memory + second brain	SQLite schema, ChromaDB setup, memory write/read functions, basic tagging pipeline, search functionality	Mira remembers facts you tell her and surfaces them accurately
Phase 4: Android app + watch	React Native foreground service, basic audio capture, Whisper transcription, phone-to-desktop sync, Wear OS companion app with one-tap capture	Phone is capturing audio and sending transcripts to Mira's memory
Phase 5: Computer use skeleton	Anthropic computer use integration, screenshot capture, basic mouse/keyboard control, action logging	Mira can open a browser, navigate to a URL, and report back
Phase 6: PA module	Gmail integration, Google Calendar API, daily briefing generation, email triage, draft reply pipeline	Mira sends morning briefing and presents email drafts for approval
Phase 7: Trading module	MT5 computer use control, EA monitoring, trade logging, DalyKraken crypto integration, Polymarket module	Mira monitors MT5 and sends daily trading reports
Phase 8: Content + social	Social media API connections, content generation pipeline, scheduling system, persona training on second brain data	Mira posts daily to at least 2 platforms autonomously
Phase 9: Pattern + mood intelligence	Pattern recognition engine, weekly insight generation,	Mira delivers weekly review with genuine behavioural insights

	cognitive performance scheduling, mood inference from biometrics	
Phase 10: Personal life module	Financial guardian, health tracking, travel module, family calendar, relationship CRM	Mira sends Monday net worth update and flags upcoming important dates
Phase 11: Web dashboard + voice	React web app, visual monitoring dashboard, voice interface (Whisper STT + ElevenLabs TTS), earning module reports	Mira has a full visual control panel accessible from any device

13.1 Earning Module Activation Schedule

Module	Activates at...
Polymarket alpha engine	Phase 7 (crypto module complete)
Digital product store	Phase 8 (content pipeline live — products are first content)
Freelance agent	Phase 8 (computer use + content creation both required)
Content monetisation	Phase 9 (3 months of consistent posting history needed)
Consulting pipeline	Phase 9 (LinkedIn presence established)
Newsletter	Phase 11 (audience built from social modules)

13.2 Phase 1 — Exact Steps

Do these in order. Each step verified before moving to the next.

17. Install Google Drive for Desktop on Mac: drive.google.com/drive/download
18. Install Google Drive for Desktop on Windows desktop: same URL
19. Sign into same Google account on both — confirm Mira/ folder appears on both devices
20. Install Tailscale on Mac: tailscale.com/download — create free account
21. Install Tailscale on Windows desktop — sign into same account
22. Verify both devices appear in Tailscale network — ping from Mac to desktop IP
23. Install Python 3.11 on Windows desktop: python.org/downloads
24. Install Node.js LTS on Windows desktop (needed for some tools): nodejs.org

25. Create Mira/ folder structure on Google Drive: Mira/agent/, Mira/mobile/, Mira/dashboard/, Mira/docs/
26. Store Anthropic API key in Mira/agent/.env file (never commit this to any repository)
27. Install python-telegram-bot: pip install python-telegram-bot
28. Create Telegram bot via @BotFather — get token, add to .env
29. Verify: send a test message to the bot, confirm it appears in agent logs

14. Technical Architecture

14.1 Agent Core Loop

The heart of Mira is a continuous loop running on the desktop:

30. Listen — monitor all input channels (Telegram, memory queue, scheduled tasks, event triggers)
31. Plan — Claude API determines what action to take and in what order
32. Execute — computer use, API calls, file operations, messaging
33. Log — all actions written to memory with outcome
34. Notify — Telegram notification sent for every action taken
35. Learn — outcome fed back into memory to improve future decisions
36. Sleep — brief pause then back to step 1

14.2 File Structure

```
Mira/   agent/     main.py            # Core loop     telegram_bot.py      # Telegram interface
memory/       sqlite_store.py    # Structured memory       vector_store.py    # ChromaDB
semantic memory       knowledge_graph.py # NetworkX graph     modules/       trading.py
# MT5 + crypto       pa.py             # Email + calendar       social.py          # Social media
earning.py         # Freelance + products       personal.py        # Health + finance
computer_use/       agent.py          # Anthropic computer use       actions.py         #
Mouse/keyboard helpers     capture/       audio_processor.py # Whisper transcription
ingest.py          # Memory pipeline     .env                # API keys (never shared)
requirements.txt     # Python dependencies   mobile/              # React Native app
dashboard/           # React web app   docs/                # This document
```

14.3 Key Dependencies

Library	Purpose	Install command
anthropic	Claude API + computer use	pip install anthropic
python-telegram-bot	Telegram bot interface	pip install python-telegram-bot
chromadb	Vector database (semantic memory)	pip install chromadb
whisper	Local audio transcription	pip install openai-whisper
networkx	Knowledge graph	pip install networkx

google-api-python-client	Gmail + Google Calendar	pip install google-api-python-client
Pillow	Screenshot processing	pip install Pillow
pyautogui	Mouse/keyboard control backup	pip install pyautogui
schedule	Task scheduling	pip install schedule
cryptography	AES-256 encryption for stored data	pip install cryptography
sentence-transformers	Local text embeddings	pip install sentence-transformers

15. Safety, Kill Switch & Oversight

With full autonomy comes full responsibility. These safety mechanisms are non-negotiable and built in Phase 2 before any autonomous actions are enabled.

15.1 Kill Switch

- Single Telegram command: /killswitch — immediately pauses ALL autonomous actions
- All pending tasks cancelled, all scheduled posts held, all trades paused
- Mira enters 'listen only' mode — responds to messages but takes no autonomous action
- Resume with: /resume — full capabilities restored
- Also accessible from web dashboard and watch app quick command
- Kill switch state persists across restarts — requires explicit /resume to deactivate

15.2 Risk Limits (Trading)

- Hard daily drawdown limit — you define the %, Mira enforces it absolutely
- Maximum position size per trade — defined in config, cannot be overridden without your command
- Maximum total open exposure — circuit breaker if portfolio risk exceeds threshold
- All risk limits stored in plaintext config — no code change required to update them

15.3 Notification Guarantee

- Every autonomous action generates a Telegram notification — no silent operations
- Notification format: [MODULE] Action taken | Outcome | Any follow-up required
- Unacknowledged notifications escalated (repeat every 15 min for high-priority items)
- Daily action log: complete list of everything Mira did that day, delivered at 10pm

15.4 Data Safety

- All personal data AES-256 encrypted at rest on desktop
- Encryption key stored separately from data (on USB, not on desktop)
- Daily automated backup to an encrypted external drive or second location
- No personal data in API calls — only the minimum context needed for each task

- Claude API: requests are processed but not used for training per Anthropic's API terms

16. Future Vision — Beyond v1

16.1 Fine-tuned Personal Model (12-18 months)

By the time Mira has been running for 12+ months, she will have accumulated a dataset that is uniquely you — your voice, your decision patterns, your values, your knowledge. This data is sufficient to fine-tune a small personal AI model that genuinely thinks like you. Not just mimics your writing — actually internalises your judgment. This is the endpoint: an AI that is not just trained on the world but trained on you.

16.2 Mira as a Product

Once Mira works demonstrably well for you, the system itself becomes a product. Other high performers — founders, traders, executives — would pay for a personalised autonomous agent with this capability. You would be the only person selling something you have personally used and refined for years. The product validates itself through your own life first.

- White-label: sell the core platform to individuals
- SaaS: charge monthly subscription for hosted Mira instances
- Agency model: sell 'Mira setup and onboarding' as a high-ticket service
- Enterprise: sell to companies wanting AI-powered operations agents

16.3 Multi-Agent Organisation

At full scale, Mira is not one agent — she is an organisation. A trading desk, a content agency, a research team, a personal concierge. Each sub-agent specialised. Mira orchestrates. You direct strategy. The desktop becomes a 24/7 autonomous business with you as the sole principal.

Appendix — Quick Reference

A. All Telegram Commands

Command	Module	Action
/killswitch	Safety	Pause all autonomous actions immediately
/resume	Safety	Resume full autonomous operation
/status	Core	Current status of all modules
/brief	PA	Force generate daily briefing now
/trades	Trading	Show all open MT5 positions
/close_all	Trading	Close all open positions
/pause_trading	Trading	Halt new trade execution
/portfolio	Crypto	Show full crypto portfolio
/research [topic]	Intel	Run deep research on any topic
/remember [fact]	Memory	Store a specific fact or note
/recall [query]	Memory	Search second brain by meaning
/post [platform] [content]	Social	Draft and queue a social post
/meeting [in X mins]	PA	Generate brief for upcoming meeting
/budget	Finance	This month's personal P&L so far
/networth	Finance	Current net worth snapshot
/risk [%]	Trading	Update daily drawdown limit
/pause_listen	Capture	Pause audio capture for 30 minutes
/weekly	Memory	Force generate weekly review
/earn	Earning	Report on all active earning modules

B. Earning Potential Summary

Module	Monthly Range	Time to Active

Polymarket alpha engine	$500 - $5,000	Phase 7 (approx 3 months)
Content monetisation	$200 - $5,000	Phase 9 (approx 5 months)
Consulting pipeline	$2,000 - $10,000	Phase 9 (approx 5 months)
Freelance agent	$500 - $3,000	Phase 8 (approx 4 months)
Digital product store	$100 - $2,000	Phase 8 (approx 4 months)
Paid newsletter	$200 - $2,000	Phase 11 (approx 7 months)
TOTAL POTENTIAL	$3,500 - $27,000+	Fully active by month 7

C. Open Items Before Build Starts

Item	Status
Project name	RESOLVED — Mira
Social media persona	IN PROGRESS — defined conversationally during build
Trading risk limits (drawdown %)	TO DEFINE — before Phase 7 begins
Daily briefing time	TO DEFINE — default 7:00am Manila time
Polymarket risk budget	TO DEFINE — before Phase 7 begins
WhatsApp close contacts list	TO DEFINE — before Phase 6 begins
Gmail account connection	TO ACTION — Phase 6 setup
Google Calendar connection	TO ACTION — Phase 6 setup

Mira v1.0 — MVP & Process Document | March 2026 | Confidential — Personal Use Only

This document is the single source of truth for the Mira project. Update it as the build evolves.
